**KEYSTROKE CAPTURING**

## KEYSTROKE CAPTURING/LOGGING

Keystroke logging is a type of identity theft executed through a software program, that can be downloaded to your device through any malicious email attachments, web links, or fraudulent websites that secretly track the keys on your device's keyboard as they are struck and transmit the data to the fraudster for storage.

## HOW TO AVOID BEING A VICTIM

**Use 2-Step Verification :**
Enable multifactor authentication (if available) such as OTP, User Presence; etc., when someone tries to access your account without your permission, you will get notified immediately.

**Install Software Updates:**
It will patch vulnerabilities on the device to prevent exploit kits from injecting key-loggers.

**Avoid Downloading Crack Software:**
Crack software are often infected with malware. They are free, but they could be unsafe for your computer/device. You may inadvertently install a key-logger disguised as computer software.

**Install Anti Malware Program:**
It scans the files that enter the device, therefore detects, and prevents malicious software. It also regularly scans the device for malwares to keep it secure.
